Four Lobes of Cerebrum:
1) frontal lobe:
- control thinking, planning, organizing, problem solving, decision making, short-term memory and movement
- anterior
Did you know...

Part of the **frontal lobe** (used to make decisions & understand consequences) does not fully develop until you are in the 20's!!
b. **parietal lobe:**
- superior & medial
- interpret sensory information, such as taste, temperature and touch
c. **occipital lobe:**
- process images from your eyes and link that information with images stored in memory
- **posterior**
d. **temporal lobe:**
- process information from your senses of smell, taste and sound
- memory storage
- medial & inferior
Internal Brain Structures

Color & label the internal brain structures to match the diagram.
